

Renewable Energy

What should we do to fix renewable energy?
 To help you could start by turning light off when you don't need them on.
 Turn the lights off when you go to bed.

What can I do? to help Renewable energy?

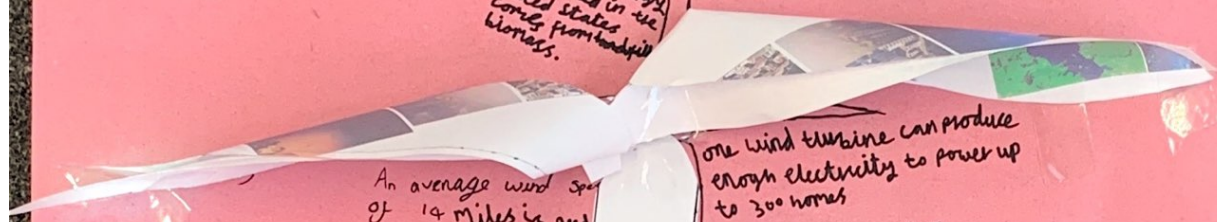

1. Reduce air pollution.
2. Cut global warming emissions.
3. Create new jobs and industries.
4. Diversify our power supply.
5. Decrease dependence on coal and other fossil fuels.
6. Move America toward a cleaner, healthier energy future.

FACTS

Impact
 The evolution of renewable

an average
 A almost half of renewable energy is produced in the United States come from landfill biomass.

The largest wind turbine in the world, located in Hawaii, stands 20 stories tall and has blades the length of a football field.

An average wind speed of 14 miles is needed to convert wind energy into electricity.

In southern Iowa and Wisconsin, biomass energy from landfills and dairy farms is being used to make electricity.

incredibly as of 2017 china built 2 wind turbine every hour

Renewable energy sources like wind, and solar power now generate almost a 1/3 of the UK electricity

Siemens built the first ever commercial offshore wind turbine 30 years ago.

one wind turbine can produce enough electricity to power up to 300 homes

wind farms currently produce enough electricity to meet the needs of more than 600,000 families in the United States.

The first modern wind turbine was built in Vermont in the early 1940s.

Renewable energy creates 5x more jobs than fossil fuels.

Fossil fuels still get 4x the subsidy of renewables from 20 different nations.

Just one wind turbine can generate enough electricity to power
